

RESIDENTIAL BACK PATIO - MERCER, PA

PROJECT DESCRIPTION

The owner of this residential back patio used Arisfor Multi-Surface Waterproofer (MSW) to seal and protect their new construction. The patio is 450 sq ft and only 2 gal of this high-performing, 100% penetrating sealer was used to protect and seal the entire structure. Because the concrete is protected from “within” it **will last longer than a traditional surface film sealer resulting in less maintenance and nicer looking concrete for years to come.** MSW was used on this new, broom-finished project just 3 days after the concrete was poured. In the end, only a single coat of MSW was used and **no residue or film was left behind.** Using MSW will **reduce mold and mildew growth** in the future since this patio is located in a shaded area with no direct sunlight. **“I’m able to easily clean and protect my concrete from water and winter salts without changing the surface or appearance of the slab at all,”** says the homeowner.

KEY POINTS

- Quick Dry Time
- Protect Against the Elements
- Superior Finish

DETAILS

Date: September 2018

Location: Grove City, Pa

Product: Arisfor ToughDeck®

Application: Power Sprayer
